Homework Question: Mini Rockbot

Build a two-tab, single-page AJAX app using the javascript framework of your choice and the specifications and API endpoint below. No need to worry too much about the styling - just focus on the data modeling and interaction. The resulting app should be delivered in a zip file with the HTML, CSS, and Javascript.

Tab 1: Displays the now playing track information and upcoming queue at Rockbot HQ, along with voting information. The data should update automatically every 30 seconds.

Tab 2: Show the top users and top artists at Rockbot HQ

API Endpoint: https://api.rockbot.com/v2/venue/10
